AUTOMATED KEY CONTROL WITH ACCOUNTABILITY

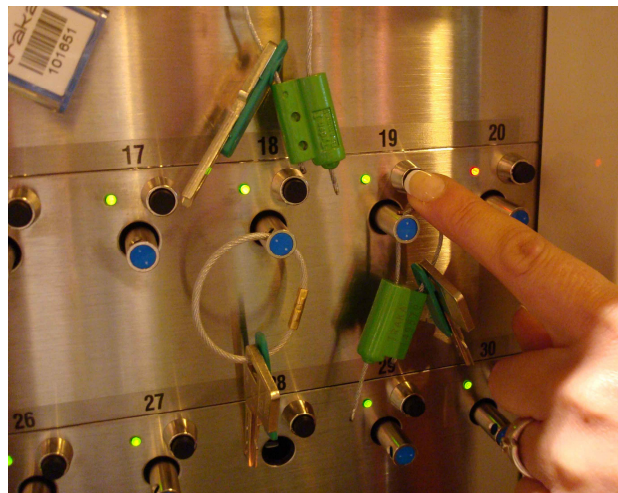

Secure Asset Management Solutions

Think about the following questions:

- In an emergency do you know who has the asset or keys?
- What would be the cost of losing an asset or your keys?
- How much down time might a lost asset or key cost?
- Do you always know who has access to your important assets or keys?
- Do you comply with security requirements and compliance for your assets or key management?
- Do unqualified people have access to your facilities, machinery and vehicles?

The Traka automated Key system includes a range of modular key cabinets from a single 10 key system to networked cabinets capable of supporting 1000's of keys that can be installed as stand alone devices or can be integrated with most electronic access control systems. These electronic access systems support a full range of options including biometric readers and network adapters that can send out SMS messages to report alarms. Traka cabinets are manufactured from Zintec steel and are powder coated. Clear doors when fitted are made from polycarbonate.

Traka32 is the support software for Traka key cabinets. This software gives a graphical representation of the cabinets and allows the user to easily see what activity is happening on each Traka cabinet within the electronic access system. The software is used to set up the Users and the Key details and to record the events that have taken place. The software will also record any alarms that have been activated.

Keys are attached to iFobs which are nickel plated brass bullet-shaped devices 40mm long x 10mm in diameter. They contain a chip which gives them a unique electronic ID. By attaching these iFobs to your keys within the automated key system, Traka electronically tags your keys, and by controlling access using PINs, access cards or biometrics you can audit every user of every key or bunch of keys. You can be sure that the keys have been taken by authorized staff only and that the users will know they must take care of the key and the asset managed by the key as they will be held fully accountable.

Scalable for the unique needs of your facility the Traka Key Management system offers space-saving, expandable styles to accommodate thousands of keys with modular storage options for specialized industry requirements. These customizable key control systems provide unsurpassed storage, flexibility and convenience, making them a must have solution for:

• Casino and Gaming Facilities	• Corporate Buildings	• Hotels & Resorts	• Educational Institutions
• Hospital and Health Care Facilities	• Government Facilities	• Conference Centers	• Automotive Centers
• Correctional Facilities	• Water Authorities	• Multifamily Buildings	• Power Plants
