## Corrective Analog Sync System Clocks

Ideal for New Applications or Replacing Failing Older Clocks in Your Existing Wired Cincinnati, Edwards, Simplex or IBM Corrective Clock Systems

Our Solid State clocks are the first of its kind capable of reading the correction signal for many systems upon installation with no manual adjustment.

When replacing clocks for the brands listed below, compare Our electronic clocks with solid-state corrective movements to our traditional clocks with mechanical corrective movements.

### Cincinnati/Edwards Corrective Clocks

We distribute high quality secondary analog replacement Cincinnati/Edwards compatible clocks, with wired synchronous correction with traditional mechanical clock movements or with new electronic solid-state circuit board movement instead of the traditional mechanical movement and use up to 80% less energy

**New Cincinnati Solid State Movement**

**Old Style Mechanical Cincinnati Movement**  
**\*Discontinued**

### Simplex/IBM Corrective Clocks

We distribute high quality secondary analog replacement Simplex and IBM compatible clocks with wired synchronous correction with traditional mechanical clock movements or with new electronic solid-state circuit board movement instead of the traditional mechanical movement and use up to 80% less energy

**New Simplex Solid State Movement**

**Old Style Mechanical Simplex Movement**  
**\*Discontinued**

**Affordable Time Keeping Solutions**

# SYNCHRONOUS-WIRED

## Surface, Flush and Double Dial Mounted Corrective Solid-State Clocks With Molded Plastic Case

### FEATURES

- 1 Year Warranty
- Microprocessor controlled movement
- 15 minutes of backup power (no batteries required)
- Accuracy to within  $\pm 1$  second of a master clock
- Reduced power consumption
- Attractive modern design
- Impact-resistant black plastic case
- Shatter-resistant polycarbonate crystal
- Diagnostic LED

### DESCRIPTION

Our solid state clocks are provided in **round only** high impact black plastic cases with clear polycarbonate crystals and bold, black numerals and minute markers on a non-yellowing white dial. Stylish hour and minute hands are aluminum with a black finish and a red sweep hand.

Our clocks are designed to work with multiple master clocks and correction signals. This unit is programmed to identify the signal it receives from the master and operate as that style of clock. Changing clock operation from one style to another is as easy as unplugging the clock from one system and plugging it into another. If needed, changing the placement of two small jumpers on the circuit board can change the voltage required to run this clock from 120vac to 24vac or 24vac to 120vac. This clock provides 15 minutes of backup run power without the use of batteries. If a power outage should last longer than 15 minutes, the clock will synchronize to the master clock at the hourly and 12 hour correction cycles.

### Correction Signals

Works on:

- Hourly correction: 7-9 seconds starting at the 57th minute and 54th second. 12 hour correction: 13-18 seconds starting at 5:57:54 (am and pm).
- Hourly correction: 24-28.5 seconds starting at the 0 minute and 0 second. 12 hour correction: 24-32 minutes starting at 6:00:00 (am and pm).
- \*Hourly correction: 54-56 seconds starting at the 58th minute and 5th second. 12 hour correction: 10 pulses of 94-96 seconds starting at 5:05:00 (am and pm) and repeating every 2 minutes.
- Hourly correction: 24-26 seconds starting at 0 minute and 0 second. 12 hour correction: 25 pulses of 24-26 seconds starting at 6:00:00 (am and pm) and repeating every 60 seconds.
- Hourly correction: 63-67 seconds starting at the 58th minute and 0 second. 12 hour correction: 14 pulses of 63-67 seconds starting at 5:06:00 (am and pm) and repeating every 2 minutes.
- \*Hourly correction: 54-56 seconds starting at the 58th minute and 5th second. 12 hour correction: 12 pulses of 63-67 seconds starting at 5:05:00 (am and pm) repeating every 90 seconds.

### Synchronous Electronic Solid State Corrective Movement

# Synchronous Solid State Corrective Slave Clock Specifications

## SPECIFICATIONS

- 120vac 50/60 Hz or 24vac 50/60 Hz
- Current draw: Single dial:  
24vac, 1 watt, .043 amps  
120vac, 3 watts, .028 amps  
Double dial:  
24vac, 2 watts, .086 amps  
120vac, 6 watts, .056 amps

## GENERAL

Types of secondary clocks compatible with AllSync Plus:  
**Cincinnati** WS\*, \*D-8, \*D-10, \*D-12 Series

**Simplex®  
& IBM**

77\* Series, 82\* Series, 2310 – 92\* --  
Series, 6310 – 92\* Series

## Note:

Double dial mounting requires a 4" square electrical box in the wall or ceiling. Surface clocks have a molded in hanger in the plastic case used to secure the clock to a bracket (pictured below) to a single gang electrical box.

**Note:** 12" surface mount clocks include security bracket.

Maximum operating voltage: 24vac setting = 32vac  
120vac setting = 140vac  
Minimum operating voltage: 24vac setting = 18vac  
120vac setting = 105vac

\*Indicates more numbers before or after.
