Prices vary on quantity please contact for more information

**System Specifications:**

The 4.6MHz SP Guardian is an innovative system package as a single panel transceiver. The system functions in nearly the same way as a standard RF system, but at a wider aisle width and requires only one antenna to operate. This system can detect tags at approx 3 to 4 feet on either side of a single panel. If two panels are used, the electronics do not have to be synchronized, which minimizes installation time and after sales servicing

Height: 60.5 (152.4cm)

Weight: 10.5lbs (4.8kgs)

Depth: 1" (2.54cm)

Width: 14" (35.6cm)
